

Simplify with Faria Bus Systems

from Faria Marine Instruments

The Faria Bus system is the next generation in electronic marine engine monitoring instrumentation. This system gives the boat builder a Digital Stepper Motor driven instruments with all of the accuracy that today's engine ECUs provide.

The Faria Bus system connects directly to a wide variety of engine protocol buses. Yet the boater sees only the simple to read, streamline gauges that they are accustomed to seeing.

Tachometer and Speedometer are available in 5-inch, 4-inch with and without Warning Lights. Discrete functions are displayed on 2-inch systems gauges or can be combined into a Multifunction gauge.

The Faria LCD gauge displays engine functions as a digital function.

Features:

- Single twisted pair wire connects all gauges.
- Serial Bus reliability
- Waterproof connectors.
- Digitally display information
- Available in many Faria styles

Faria Bus Controller

Add the Faria Bus Controller to your MG2000, Antares or MG3000!

This innovative new product from the team at Faria allows the OEM manufacturer to control a wide array of pre-determined devices including lights, pumps, blower motors, or virtually any other electrical device on the vessel.

Input(s): Six analog inputs which can be factory modified for almost any analog input.

Output(s): Two 2 amp (max) switches to ground;
Two 6 amp (max) switches to ground;
Two (factory wired) 2 amp (max) switches; ground, ignition (+), or a second output connection (simple switch connection)

Factory installed custom programming to allow complex interaction between analog inputs and switch outputs.

Faria Bus Controller

Specifications	
Voltage:	12 or 24 volt DC
Operating Temp:	-40°C to +85°C
Faria Bus Data	Input: Faria Bus Data Output (for complex functions or simple "daisy chaining" of another controller)
Water tight construction	
Connection:	Two Deutsch , 12 pin, DTM connectors

All Faria Marine Instruments comes with a Limited Lifetime Warranty see www.faria-instruments.com for details.
